

Connected cars: a convenience while you're in control of the car — a security risk when you're not.

Access to your call logs, navigation history, saved addresses, garage codes, payment cards and more in your vehicle is incredibly convenient while you are in control of the car. But can easily pose a security risk when you no longer own the vehicle.

Identity theft happens every 22 seconds, but thieves can't steal what's not there. Delete personal data when you trade in your car.

4 out of 5 vehicles are resold with the personal data of prior drivers and passengers.

Problem:

Most dealerships don't have a rigorous process to delete your personal data. That's simply not acceptable to us.

Our commitment to your privacy sets our dealership apart.

Solution:

Let us delete personal data in your car for you. Our dealership personnel uses Privacy4Cars' multi-patented tool to remove the personal information stored in your vehicle.

Don't take our word for it — we'll give you the certification to prove it.

Types of data vehicle owners could be leaving behind, unless deleted:

- ✓ Garage codes
 - ✓ Home address
 - ✓ Prior routes & destinations
 - ✓ Text messages
 - ✓ Contacts/phonebook
 - ✓ Call logs
 - ✓ Calendar entries
 - ✓ Photos
 - ✓ Phone & individual identifiers
 - ✓ Profiles and preferences
 - ✓ Browser/media/search history
 - ✓ Biometrics/medical info
 - ✓ Payment/credit card info
 - ✓ Social media usage
 - ✓ Apps usage and logins
 - ✓ Voice recordings
- ...and more

Your privacy matters.

As your trusted dealer, we are proud to partner with Privacy4Cars, the world's leading authority on vehicle privacy and cyber security.

PRIVACY4CARS®

Trade in your car, *not* your personal data

We delete call logs, contacts, locations, text messages, route histories and more...

with AutoCleared™ – a multi-patented vehicle data deletion process powered by Privacy4Cars.
